

Private Condominium Residence

San Francisco, CA

Scenario

The 9-story, jewel-box designed building wanted to offer its residents modern amenities that matched its richly-decorated finish and contemporary architecture. During construction, the developer contacted EverCharge to assist in bringing EV charging service to every resident.

Solution

EverCharge installed 2 electrical panels, one on each floor, in the garage. Then, we ran the necessary conduit to each resident's parking space. Without EverCharge, the building would be unable to service the entire community, and be limited to 9 charging stations.

By leveraging EverCharge's industry-leading expertise and technology, all 75 residents can now bring EV charging service directly to their space at minimal cost.
